graph LR; A[show_config_fbs.show_running_fbs_service_policy_ctrlplane] --> D[show_config_fbs.__show_runn_fbs_service_policy_for_intf]; B[show_config_fbs.show_running_fbs_service_policy_global] --> D; C[show_config_fbs.show_running_fbs_service_policy_interface] --> D;
```

The diagram illustrates a mapping from three specific show commands to a single internal function. Three boxes on the left, each containing a command with a specific policy type (ctrlplane, global, or interface), have arrows pointing to a single box on the right. The box on the right contains the internal function name that handles these commands. The target box is shaded gray, while the source boxes are white.
