

show_config_routepolicy.show
_v4prefix_lists

show_config_routepolicy.show
_v6prefix_lists

show_config_routepolicy.show
_prefix_lists

```
graph LR; A[show_config_routepolicy.show_v4prefix_lists] --> C[show_config_routepolicy.show_prefix_lists]; B[show_config_routepolicy.show_v6prefix_lists] --> C;
```

The diagram illustrates a mapping or inheritance relationship. On the left, there are two white rectangular boxes. The top box contains the text 'show_config_routepolicy.show_v4prefix_lists' and the bottom box contains 'show_config_routepolicy.show_v6prefix_lists'. On the right, there is a single gray rectangular box containing the text 'show_config_routepolicy.show_prefix_lists'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both the v4 and v6 specific show commands are mapped to or inherit from the general show_prefix_lists command.
