```

The diagram illustrates a mapping from three specific ACL binding callback functions to a single, more general ACL binding function. Three boxes on the left, each containing a function name, have blue arrows pointing to a single box on the right. The boxes on the left are white with black borders, while the box on the right is gray with a black border. The arrows originate from the bottom-right corner of the first box, the right side of the second box, and the top-right corner of the third box, all converging on the left side of the target box.
