sonic\_cli\_fbs.set\_match  
\_source\_address

sonic\_cli\_fbs.\_\_set  
\_match\_address

```
graph LR; A[sonic_cli_fbs.set_match_destination_address] --> C[sonic_cli_fbs.__set_match_address]; B[sonic_cli_fbs.set_match_source_address] --> C;
```

The diagram illustrates a mapping from two separate input fields to a single output field. On the left, there are two white rectangular boxes with black borders. The top box contains the text 'sonic\_cli\_fbs.set\_match\_destination\_address' and the bottom box contains 'sonic\_cli\_fbs.set\_match\_source\_address'. On the right, there is a single gray rectangular box with a black border containing the text 'sonic\_cli\_fbs.\_\_set\_match\_address'. Two blue arrows originate from the right side of the two input boxes and point towards the left side of the output box, indicating that both inputs are used to populate the output field.
